

SAMUEL & SONS

## New for spring 2016: Optix collection

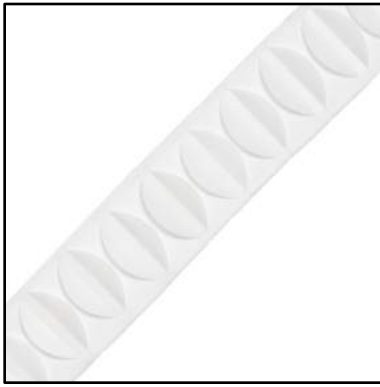

Optix is a sophisticated collection of geometric borders incorporating origami folding techniques shown through a contemporary palette of neutrals. Individual translucent acrylic foils are folded and assembled into patterns into twill borders using tonal stitching. This results in three dimensional geometric designs whose structure comes from the various angles created by the foil folds. The Optix collection explores material texture, construction and dimension in a modern and sophisticated way.

First in the collection is Elliptic Border, composed of a series of ovals, each fastened in the centre while edges extend from the surface. Available in three shades of Frost, Chamois and Stone. Kinetic Border is a series of end to end trapezoids which make up a unique 2" pattern, available in colour-ways of Charcoal, Cortado and Jet. Finishing the collection is the Quadratic Border, constructed of squares created by four folded foils whose varied diamond pattern are enhanced by horizontal and vertical lines of tonal stitching.
